TECHNICAL FEATURES

Luminous flux :

The luminous flux describes the quantity of light emitted by a light source. The luminous efficiency is the ratio of the luminous flux to the electrical power consumed (lm/W). It is a measure of a light source's economic efficiency. Unit: Lumen (lm)

Luminous intensity :

The luminous intensity describes the quantity of light that is radiated in a particular direction. This is a useful measurement for directive lighting elements such as reflectors. It is represented by the luminous intensity Distribution curve (LDC). Unit: Candela (cd)

Illuminance :

Illuminance describes the quantity of luminous flux falling on a surface. Relevant standards specify the required illuminance (e.g. EN 12464 "Lighting of indoor workplaces"). Unit: LUX (lx)

Luminance :

Luminance is the only basic lighting parameter that is perceived by the eye. It describes on the one hand a light source's impression of brightness, and on the other, a surface and therefore depends to a large extent on the degree of reflection (color and surface). It is expressed as candelas per square meter (Metric units). Unit: cd/m²

Color Rendering Index (CRI) :

A scale of the effect of a light source on the color appearance of an object compared to its color appearance under a reference light source. A low CRI rating suggests that the colors of objects will appear unnatural under that particular light source.

Color Rendering Index (Ra)	Real Object Color Appearance
Ra < 60	Poor
60 < Ra < 80	Good
80 < Ra < 90	Very Good
90 < Ra < 100	Excellent

Correlated Color Temperature (CCT) :

The color temperature is a specification of the color appearance of a light source, relating the color to a reference source heated to a particular temperature, measured by the thermal unit Kelvin (K).

Color	Color Temperature	Appearance	Association
WW (Warm White)	Upto 3300 K	Raddish	Warm
NW (Neutral White)	3300- 5300 K	White	Neutral
CDL (Cool Day Light)	From 5300 K	Bluish	Cool

Luminaries: A device used to distribute or modify light produced by light sources installed within it.

LED: Abbreviation for light emitting diode. A developing illumination technology which consumes lower energy than similar light sources.

Light: Light is that part of the electromagnetic spectrum that is perceived by our eyes. The wavelength range is between 380 and 780 nm. The cones come on during the day and we see colors, whereas at night the rods take over and we only see shades of grey.

Light source: An electrical device used to produce light, such as a halogen lamp, a neon tube or an LED.

Beam Angle: The angle of the given photometric body, measured at the half of the maximum light intensity emitted in the main direction of the light beam. The angle determines the width of the light cone. Unit: Degree

Lens: Transparent or translucent medium that alters the directional characteristics of light passing through it. Used to shape the light source made of glass, poly carbonate or acrylic.

Reflector : A surface of mirrored glass, painted metal, polished metal or metalized plastic that is shaped to project the beam from a light source in a particular direction. Reflectors may be an integral part of a lamp or they may be part of the Luminaries.

TECHNICAL FEATURES

Parameters	Value
Make	RR
Operating Voltage	160-270V
PF	>0.9/230V ac
THD	<20%, <15%
Luminaire Efficacy	>100lm/W @ 3000K
Color temperature	2700-6500K
CRI	>85
LED Beam Angle	60Deg, 90 Deg, 120 Deg
Frequency	50Hz
Efficiency	>90% / 230Vac @ full Load
Driver Make	RR/ Phillips/Fullarm/Osram
LED Make	Cree/ Citizens / Nischi / Bridgelux
Surge protection	Indoor 4KV, outdoor 6KV
Burnings life	50000hrs

SMD Surface Mounted Devices **COB** Chip On Board

Mounting Description

IP INDEX

The Ingress Protection (IP) code denotes the protection against dust, solid objects and moisture provided by the luminaire enclosure. The IP number is defined by a numerical field of two digits placed on the right of the letters IP. The first digit corresponds to the degree of protection against the penetration of dust and solid matter, while the second digit corresponds to the degree of protection against the penetration of liquids.

First digit: degree of protection against solid objects and duct

0. Non protected
1. Protection against solid objects, diameter larger than 50 mm
2. Protection against solid objects, diameter larger than 12 mm
3. Protection against solid objects, diameter larger than 2.5 mm
4. Protection against solid objects, diameter larger than 1 mm
5. Duct accumulation protected
6. Duct penetration protected

Second digit: degree of protection against moisture and water

0. Non protected
1. Drip-proof against vertical water drops
2. Drip-proof when tilted at angles up to 150
3. Protection against sprinkled water when falling at angles up to 600
4. Splash-proof
5. Jet-proof
6. Jet-proof, powerful water jet
7. Water immersion for 30 minutes at a depth of 1 meter
8. Water submersion
